

Systemic Anti Cancer Therapy Protocol

## Everolimus and Exemestane Advanced Breast Cancer

PROTOCOL REF: MPHAEVEXBR  
(Version No. 1.1)

### Approved for use in:

Postmenopausal women with ER positive, HER2 negative advanced breast cancer

No symptomatic visceral disease

Following progression/recurrence after non-steroidal aromatase inhibitor

**NOTE:** Serious and severe radiation reactions (such as radiation oesophagitis, radiation pneumonitis and radiation skin injury), including fatal cases, have been reported when everolimus was taken during, or shortly after, radiation therapy. Caution should therefore be exercised for the potentiation of radiotherapy toxicity in patients taking everolimus in close temporal relationship with radiation therapy. Radiation recall syndrome (RRS) has been reported in patients taking everolimus who had received radiation therapy in the past. In the event of RRS, interrupting or stopping everolimus treatment should be considered.

\*\*\*\*\*Requires blueteq registration\*\*\*\*\*

### Dosage:

Drug	Dose	Route	Frequency
Everolimus	10mg daily	Oral	Continuous, supply will be every 28 days
Exemestane	25mg daily	Oral	Continuous, supply will be via GP

Until disease progression or unacceptable toxicity. If everolimus is discontinued due to toxicity then exemestane can continue.

Issue Date: October 2022 Review Date: October 2025	Page 1 of 9	Protocol reference: MPHAEVEXBR	
Author: Gabriella Langton/Hala Ghoz	Authorised by: Drugs & Therapeutics Committee	Version No: 1.1	

## Administration:

Everolimus is available as 2.5 mg, 5 mg and 10 mg tablets.

It is administered orally once daily at the same time every day, consistently either with or without food.

If a dose is missed, the patient should not take an additional dose, but take the next prescribed dose as usual.

## Extravasation risk:

Not applicable .

## Supportive Treatments:

Metoclopramide 10mg tablets, to be taken up to three times a day as required for nausea and vomiting for maximum 5 consecutive days.

## Dosing in renal and hepatic impairment:

<b>Renal</b>	Everolimus	No adjustments required Elevations of serum creatinine, usually mild, and proteinuria have been reported
--------------	------------	-------------------------------------------------------------------------------------------------------------

<b>Hepatic</b>	Everolimus	Parameters	1 point	2 points	3 points
		Total bilirubin (µmol/L)	< 34	34–50	> 50
		Serum albumin (g/L)	> 35	28–35	< 28
		Prothrombin time, prolongation (s) Or INR	< 4 < 1.7	4–6 1.7-2.3	> 6 >2.3
		Ascites	None	Mild to Moderate (diuretic responsive)	Severe (diuretic refractory)

		Hepatic encephalopathy	None	Grade I–II (or suppressed with medication)	Grade III–IV (or refractory to medication)
	<b>Child-Pugh Class</b>		<b>Recommended Daily Dose</b>		
	A (5-6 points)		7.5mg		
	B (7-9 points)		5mg		
C (10 or more points)		2.5mg			
<p>INR: International Normalised Ratio.  <b>Please note:</b> assessment of Child-Pugh Class is to help guide clinical teams when prescribing and pharmacists when screening.</p>					

## Interactions:

**Radiotherapy:-** Serious and severe radiation reactions, including fatal cases, have been reported when everolimus was taken during, or shortly after, radiation therapy. In addition there is a risk of RRS, refer to the 'NOTE' on page 1 for full details.

Everolimus is metabolized by the cytochrome CYP3A4 pathway and therefore drugs that induce or inhibit this enzyme should be avoided where possible.

**INDUCERS (lowers everolimus levels):** Carbamazepine, phenobarbital, phenytoin, dexamethasone, rifabutin, rifampicin, St John's Wort, troglitazone, pioglitazone

**INHIBITORS (increases everolimus levels):** Indinavir, nelfinavir, ritonavir, clarithromycin, erythromycin, itraconazole, ketoconazole, nefazodone, grapefruit juice, verapamil, diltiazem, cimetidine, amiodarone, fluvoxamine, mibefradil

**ACE inhibitors (e.g. Ramipril, Enalapril etc)– concomitant use increases risk for angioedema.**

For more detailed interactions please refer to the SPC  
<https://www.medicines.org.uk/emc/product/12240/smpc>

## Main toxicities:

Note: exemestance side effects not included

<b>Everolimus</b>	
<b>Haematological</b>	Neutropenia, anaemia, thrombocytopenia,
<b>Gastrointestinal</b>	Nausea, vomiting, diarrhoea, mucositis
<b>Respiratory</b>	Pneumonitis, dyspnoea
<b>Hepatobiliary</b>	Elevation of liver transaminases, alkaline phosphatase and bilirubin.
<b>Renal and urinary disorders</b>	Proteinuria, blood creatinine increased, renal failure in very rare cases
<b>Skin and subcutaneous tissue disorders</b>	Skin rash Oedema
<b>General disorders and administration site conditions</b>	Hyperglycaemia Headaches Infertility, early menopause

## Investigations and treatment plan:

	Pre	Cycle 1	Cycle 2	Cycle 3	Cycle 4	Ongoing
Informed Consent	x					
Clinical Assessment	x			x		every 3 months or as clinically indicated
SACT Assessment (to include PS and toxicities)	x	x	x	x	x	Every cycle
FBC	x	x	x	x	x	Every cycle
U&E & LFTs & Magnesium	x	x	x	x	x	Every cycle
Fasting Lipids and cholesterol	x			x		Every 12 weeks
CrCl (Cockcroft and Gault)	x	x	x	x	x	Every cycle
CT scan	x					Every 12 weeks and if clinically indicated
ECG						If clinically indicated
Full observations	x	x	x	x	x	Every cycle*
Weight recorded	x	x	x	x	x	Every cycle
Random glucose	x		x	x	x	Every cycle
Height	x

# PROTOCOL

\*A diagnosis of non-infectious pneumonitis should be considered in patients presenting with non-specific respiratory signs and symptoms such as hypoxia, pleural effusion, cough or dyspnoea, and in whom infectious, neoplastic and other non-medicinal causes have been excluded by means of appropriate investigations.

## Dose Modifications and Toxicity Management:

### Haematological toxicity:

Proceed on day 1 if-

ANC $\geq 1.0 \times 10^9/L$	Plt $\geq 75 \times 10^9/L$
------------------------------	-----------------------------

Toxicity	Severity	Everolimus dose adjustment
Thrombocytopenia	Grade 2 ( $<75, \geq 50 \times 10^9/l$ )	Temporary dose interruption until recovery to Grade $\leq 1$ ( $\geq 75 \times 10^9/l$ ). Re-initiate treatment at same dose.
	Grade 3 & 4 ( $<50 \times 10^9/l$ )	Temporary dose interruption until recovery to Grade $\leq 1$ ( $\geq 75 \times 10^9/l$ ). Re-initiate treatment at 5 mg daily.
Neutropenia	Grade 2 ( $\geq 1 \times 10^9/l$ )	No dose adjustment required.
	Grade 3 ( $<1, \geq 0.5 \times 10^9/l$ )	Temporary dose interruption until recovery to Grade $\leq 2$ ( $\geq 1 \times 10^9/l$ ). Re-initiate treatment at same dose.
	Grade 4 ( $<0.5 \times 10^9/l$ )	Temporary dose interruption until recovery to Grade $\leq 2$ ( $\geq 1 \times 10^9/l$ ). Re-initiate treatment at 5 mg daily.
Febrile neutropenia	Grade 3	Temporary dose interruption until recovery to Grade $\leq 2$ ( $\geq 1.25 \times 10^9/l$ ) and no fever. Re-initiate treatment at 5 mg daily.
	Grade 4	Discontinue treatment.

### Non- Haematological toxicity:

Toxicity	Severity	Everolims dose adjustment
Non-infectious pneumonitis	Grade 2 Symptomatic; medical intervention indicated; limiting instrumental ADL	Consider interruption of therapy until symptoms improve to Grade $\leq 1$ (asymptomatic; clinical or diagnostic observations only; intervention not indicated). Re-initiate treatment at 5 mg daily. Discontinue treatment if failure to recover within 4 weeks.
	Grade 3 Severe symptoms; limiting self care ADL; oxygen indicated	Interrupt treatment until symptoms resolve to Grade $\leq 1$ . Consider re-initiating treatment at 5 mg daily. If toxicity recurs at Grade 3, consider discontinuation.

	Grade 4 Life-threatening respiratory compromise; urgent intervention indicated (e.g., tracheotomy or intubation)	Discontinue treatment.
Stomatitis	Grade 2	Temporary dose interruption until recovery to Grade $\leq 1$ . Re-initiate treatment at same dose. If stomatitis recurs at Grade 2, interrupt dose until recovery to Grade $\leq 1$ . Re-initiate treatment at 5 mg daily.
	Grade 3	Temporary dose interruption until recovery to Grade $\leq 1$ . Re-initiate treatment at 5 mg daily.
	Grade 4	Discontinue treatment.
Other non-haematological toxicities (excluding metabolic events)	Grade 2	If toxicity is tolerable, no dose adjustment required. If toxicity becomes intolerable, temporary dose interruption until recovery to Grade $\leq 1$ . Re-initiate treatment at same dose. If toxicity recurs at Grade 2, interrupt treatment until recovery to Grade $\leq 1$ . Re-initiate treatment at 5 mg daily.
	Grade 3	Temporary dose interruption until recovery to Grade $\leq 1$ . Consider re-initiating treatment at 5 mg daily. If toxicity recurs at Grade 3, consider discontinuation.
	Grade 4	Discontinue treatment.
Metabolic events (e.g. hyperglycaemia, dyslipidaemia)	Grade 2	No dose adjustment required.
	Grade 3	Temporary dose interruption. Re-initiate treatment at 5 mg daily.
	Grade 4	Discontinue treatment.
