

Systemic Anti Cancer Therapy Protocol

## CVD – Cyclophosphamide, Bortezomib and Dexamethasone Full Dose Protocol AMYLOIDOSIS

PROTOCOL REF: MPHACVDFHA  
(Version No. 1.1)

### Approved for use in:

- This is the **full dose** CVD protocol; please ensure you have the correct protocol before proceeding.
- This protocol is for patients with Mayo Stage I and selected stage II Amyloidosis as per recommendation from the National Amyloidosis Centre (NAC).

**Blueteq registration is not required**

### Dosage:

Drug	Dose	Route	Frequency
Bortezomib	1.3mg/m <sup>2</sup>	S/C	Days 1, 4, 8 and 11
Cyclophosphamide	350mg/m <sup>2</sup> (max 500mg)	Oral	Days 1, 8 and 15
Dexamethasone	20mg	Oral	<b>Cycle 1:</b> Day 1 only <b>Subsequent cycles (if tolerated):</b> Days 1, 2, 4, 5, 8, 9, 11 and 12

**Maximum of 8 cycles (21 day cycle).**

### Administration and counselling points:

- There must be a gap of at least 72 hours between bortezomib doses.
- Cyclophosphamide should be taken on an empty stomach; that is an hour before food or two hours after food.

- All patients will receive a minimum of three cycles of CVD in the absence of unacceptable toxicity or poor tolerability.
- Patients who achieve a complete response or VGPR will continue for one more cycle after achieving response (e.g. if patient has achieved CR or VGPR at cycle 1 or 2, they will finish three cycles and stop. If they achieve CR or plateau after cycle 3, they will receive one more cycle after achieving CR or plateau).
- Patients with ongoing reduction in dFLC should continue until they achieve VGPR or complete response or to a maximum of 8 cycles.
- Patients who have not responded to treatment by end of cycle 2 will need regime modification after discussion with the National Amyloid Centre or as per local practice.
- **Sudden Cardiac Death:** patients with proven/suspected cardiac amyloid have a risk of fatal arrhythmias in the early days/weeks of treatment. Patients should be counselled appropriately for this and considered for telemetry at treatment initiation.

## Emetogenic risk:

Moderately emetogenic.

## Supportive treatments:

- Allopurinol 300mg PO daily (first cycle only)
- Aciclovir PO 400mg twice daily
- Co-trimoxazole PO 480mg daily
- Nystatin 1ml oral suspension four times a day **or** fluconazole PO 50mg daily
- Omeprazole 20mg PO daily
- Metoclopramide 10mg PO three times a day if needed
- Doxycycline 100mg PO twice daily at clinician discretion if cardiac amyloid

## Extravasation Risk:

Bortezomib: Non vesicant

Refer to the CCC policy for the 'Prevention and Management of Extravasation Injuries'

Issue Date: August 2023 Review Date: August 2026	Page 2 of 9	Protocol reference: MPHACVDFHA
Author: Jennifer Gibson	Authorised by: CCSG/DTC	Version No: 1.1

## Interactions:

### Bortezomib

- Strong CYP3A4 inhibitors (ketoconazole, ritonavir) – monitor closely as potential increase exposure to bortezomib
- Strong CYP3A4 inducers (rifampicin, carbamazepine, phenytoin, phenobarbital, St John’s Wort) – not recommended as efficacy of bortezomib may be reduced.

### Cyclophosphamide

Substances that reduce the efficacy of cyclophosphamide include:

Aprepitant, bupropion, busulfan, ciprofloxacin, chloramphenicol, azole-antimycotics (e.g. fluconazole and itraconazole, CYP2B6 and CYP3A4 inhibitors (e.g. nevirapin and ritonavir): co-administration may reduce the efficacy of cyclophosphamide, prasugrel, sulfonamides, e.g. sulfadiazine, sulfamethoxazole and sulfapyridine, thiotepa, grapefruit (fruit or juice), rifampicin, St. John’s wort.

An increased risk of side-effects may occur with:

Azathioprine: increased risk of hepatotoxicity (liver necrosis), chloral hydrate, cimetidine, disulfiram, glyceraldehyde, protease inhibitors, saquinavir, rifampin, phenobarbital, carbamazepine, phenytoin, St. John's wort, benzodiazepines, corticosteroids and dabrafenib.

There is an increased risk of cardiotoxicity when cyclophosphamide is co-administered with:

Anthracyclines, mitomycin, cytarabine, pentostatin and radiation therapy.

For more detailed interactions please refer to the SPC.

Issue Date: August 2023 Review Date: August 2026	Page 3 of 9	Protocol reference: MPHACVDFHA
Author: Jennifer Gibson	Authorised by: CCSG/DTC	Version No: 1.1

## Dosing in renal and hepatic impairment:

Renal Dose Modifications		
	Creatinine Clearance (mL/min)	Modification
Cyclophosphamide	10 - 29	Consider 75% dose ie 250mg/m <sup>2</sup>
	<10 or haemodialysis	Not recommended. If unavoidable consider 50% of dose.
Bortezomib	No dose adjustments required but bortezomib should be administered after dialysis.	

Hepatic Dose Modifications		
	Impairment	Modification
Cyclophosphamide	Severe	Not recommended
Bortezomib	Bilirubin >1.5xULN	Reduce to 0.7mg/m <sup>2</sup> . Consider dose escalation or further reduction in subsequent cycles

## Treatment schedule Cycle 1:

Day	Drug	Dose	Route
1	Bortezomib	1.3mg/m <sup>2</sup>	S/C
	Cyclophosphamide	350mg/m <sup>2</sup> (max 500mg)	PO
	Dexamethasone	20mg	PO
4	Bortezomib	1.3mg/m <sup>2</sup>	S/C
8	Bortezomib	1.3mg/m <sup>2</sup>	S/C
	Cyclophosphamide	350mg/m <sup>2</sup> (max 500mg)	PO
11	Bortezomib	1.3mg/m <sup>2</sup>	S/C
15	Cyclophosphamide	350mg/m <sup>2</sup> (max 500mg)	PO

## Treatment schedule Cycle 2+ (if tolerated dexamethasone):

Day	Drug	Dose	Route
1	Bortezomib	1.3mg/m <sup>2</sup>	S/C
	Cyclophosphamide	350mg/m <sup>2</sup> (max 500mg)	PO
	Dexamethasone	20mg	PO
2	Dexamethasone	20mg	PO
4	Bortezomib	1.3mg/m <sup>2</sup>	S/C
	Dexamethasone	20mg	PO
5	Dexamethasone	20mg	PO
8	Bortezomib	1.3mg/m <sup>2</sup>	S/C
	Cyclophosphamide	350mg/m <sup>2</sup> (max 500mg)	PO
	Dexamethasone	20mg	PO
9	Dexamethasone	20mg	PO
11	Bortezomib	1.3mg/m <sup>2</sup>	S/C
	Dexamethasone	20mg	PO
12	Dexamethasone	20mg	PO
15	Cyclophosphamide	350mg/m <sup>2</sup> (max 500mg)	PO

## Main toxicities:

### Bortezomib

Bone marrow suppression (anaemia, thrombocytopenia, neutropenia), herpes zoster, herpes simplex, hepatitis B reactivation, pneumonia, fungal infection, leukopenia, lymphopenia, reduced appetite, dehydration, hypokalaemia, hyponatraemia, hypocalcaemia, mood disorder, anxiety, sleep disorders, neuropathy, peripheral neuropathy, neuralgia, dysaesthesia, lethargy, syncope, conjunctivitis, eye swelling, vertigo, hypotension, hypertension, epistaxis, nausea, vomiting, diarrhoea, constipation, rash, dry skin, renal impairment, fatigue, seizures (very rare), progressive multifocal leukoencephalopathy (PML)

### Cyclophosphamide

Infection, myelosuppression, immunosuppression, haemolytic uraemic syndrome, abnormal hepatic function, alopecia, cystitis, haemorrhagic cystitis, haematuria, impairment of spermatogenesis, fever, asthenia, mucosal inflammation

## Investigations and treatment plan:

	Pre	Cycle 1+ D1	Cycle 1 D2	Cycle 1+ D4	Cycle 1+ D8	Cycle 1+ D11	Ongoing
Informed consent	X						
Clinical Assessment (including performance status toxicity assessment)	X	X					
SACT Assessment (including toxicity assessment)		X		X	X	X	
FBC	X	X					
U&E, LFTs and calcium profile	X	X					
Hepatitis B core antibody and surface antigens & Hep C & HIV 1+2	X						
HbA1c and glucose	X						Repeat if clinically indicated
Serum Igs/electrophoresis/serum free light chains (if indicated)	X	X					
Neurological assessment (for neuropathy) – performed at medical review	X	X					
Blood pressure	X	X		X	X	X	
Cardiac monitoring		X	X				To be considered, discuss with consultant. Would need in patient admission
Weight	X	X					
Height	X						
Pregnancy test	X						If clinically indicated
Imaging as per NICE/network guidance and clinical indication	X						To restage as indicated

## Dose Modifications and Toxicity Management:

### Haematological toxicity:

Cycle can proceed if:

ANC $\geq 1.0 \times 10^9/L$	Platelets $\geq 70 \times 10^9/L$
------------------------------	-----------------------------------

Neutrophils ( $\times 10^9/L$ )		Platelets ( $\times 10^9/L$ )	Recommendation
0.75 – 1.0	or	30 to 70	<p>Delay cyclophosphamide 1 week (continue dexamethasone and bortezomib). Restart at same dose when neutrophils and platelets recovered as above. If recurrent, i.e. if neutrophils <math>&lt; 1.0 \times 10^9/L</math> and platelets <math>&lt; 50 \times 10^9/L</math> on day 1 of subsequent cycles (when previously <math>&gt;</math> than these levels), delay cyclophosphamide and consider dose reduction of cyclophosphamide. If the patient was receiving 500 mg weekly, reduce to 400 mg, if 400 mg reduce to 300 mg, if 300 mg reduce to 200 mg.</p> <p style="text-align: center;">Consider adding G-CSF weekly if neutropenia</p>
$< 0.75$	or	$< 30$	<p>Withhold chemotherapy until recovery. Once recovered, reduce bortezomib dose by one level and consider reducing cyclophosphamide dose as above. (1.6mg/m<sup>2</sup> dose reduced to 1.3mg/m<sup>2</sup>, 1.3mg/m<sup>2</sup> dose reduced to 1.0mg/m<sup>2</sup>, 1.0mg/m<sup>2</sup> dose reduced to 0.7mg/m<sup>2</sup>)</p> <p style="text-align: center;">Discontinue treatment if still cytopenic on lowest possible dose.</p>

These haematological guidelines assume that patients are well with good performance status, that other acute toxicities have resolved and the patient has not had a previous episode of neutropenic sepsis.

### Non- Haematological toxicity:

Bortezomib treatment must be withheld at the onset of any Grade 3 non-haematological excluding neuropathy as (further information on management of neuropathy below). Once the symptoms of the toxicity have resolved, bortezomib treatment may be re-

Issue Date: August 2023 Review Date: August 2026	Page 7 of 9	Protocol reference: MPHACVDFHA
Author: Jennifer Gibson	Authorised by: CCSG/DTC	Version No: 1.1

initiated at a 25% reduced dose (1.3 mg/m<sup>2</sup> reduced to 1.0 mg/m<sup>2</sup>; 1.0 mg/m<sup>2</sup> reduced to 0.7 mg/m<sup>2</sup>). If the toxicity is not resolved or if it recurs at the lowest dose, discontinuation of bortezomib must be considered unless the benefit of treatment clearly outweighs the risk.

## Peripheral Neuropathy

Bortezomib	
If there are symptoms of peripheral neuropathy the dose reduction schedule below must be invoked. Bortezomib should be stopped if symptoms or signs progress despite this	
Grade 1 with no pain or loss of function	Dose adjustment
Grade 1 with pain or grade 2	Reduce to 1.0mg/m <sup>2</sup> or reduce to 1.3mg/m <sup>2</sup> weekly (day 1 and 8)
Grade 2 with pain of grade 3	Withhold treatment until symptoms of toxicity have resolved. When toxicity resolves re-initiate treatment at 0.7mg/m <sup>2</sup> weekly (day 1 and 8)
Grade 4 and/or severe autonomic neuropathy	Discontinue
